

Autochartist™ Quick Reference Sheet

Viewing a Pattern

To view a completed or emerging chart pattern, double-click the row in the pattern matrix. The pattern will appear in a separate window, along with a number of pattern indicators and quality ratings. If the market changes and the trend no longer fits the shape of the pattern that was initially anticipated, Autochartist™ displays a message indicating that the pattern is no longer valid.

Standard Pattern Display

Fibonacci Pattern Display

PATTERN DISPLAY KEY

A Currency chart and current pattern.

B Pattern indicators (see descriptions on page 2).

Forecast region: Forecasts a potential target price region.

Autochartist™ Quick Reference Sheet

Autochartist™ Pattern Indicators (see images)

1. **Exchange** – The type of instrument (FOREX) you are trading.
2. **Symbol** – The currency pair for which the pattern was found.
3. **Interval** – Time interval of the data on which the pattern was identified. If all patterns in your search were identified on the same interval, this column will be hidden.
4. **Pattern** – The type of pattern identified.
5. **Pattern End (Standard)** – Date and time at which the pattern broke through either the support or resistance line. Note: date is shown as day/month.
6. **Pattern End (Fibonacci)** – The date and time at which the pattern reached its completion. Note: Date is shown as day/month.
7. **Trend Change** – This is either a continuation or reversal.
8. **Length** – Length of the pattern. This is the amount of time that a pattern took to develop for that specific time frame. For example, a pattern length of 30 found on 60-minute interval would mean that the pattern was formed over 30 hours. Generally, the longer the pattern, the more reliable it may be.
9. **Direction (Standard)** – Direction in which the breakout occurred. An up arrow means the price broke through the resistance line. A down arrow means the price broke through the support line. In the case of emerging patterns, blank arrows (up or down) are used to indicate the anticipated breakout direction.
10. **Direction (Fibonacci)** – Direction in which the market is forecasted to move following the pattern's end.
11. **Quality** – The average of all the other pattern indicators, offering an overall quality score. Note: A higher quality score does not guarantee that the market will behave as forecasted.
12. **Time Symmetry** – Identifies how well the pattern fits with its ideal standards in terms of timing.
13. **Price Symmetry** – Identifies how well the pattern fits with its ideal standards in terms of Fibonacci ratios.
14. **Initial Trend** – Quality of the trend preceding the pattern formation. A longer, steadier initial trend is an important component of a high-quality pattern.
15. **Uniformity** – How uniformly spaced the price turning points are that touch the support or resistance lines. Generally, the more uniform the turning points, the better the trend.
16. **Clarity** – The number of random price movements during the formation of the pattern. The less random price movements, the better the clarity score.
17. **Breakout** – The decisiveness with which the price broke through the support or resistance line. This quality measure is irrelevant for emerging patterns.
18. **Volume** – The relative amount of increase in the trading volume at the time of breakout through the support or resistance line. This quality measure is irrelevant for emerging patterns. This characteristic is only relevant to exchange-traded instruments, such as stocks or futures.
19. **Targets** – Indicate price targets determined by the Fibonacci retracement/extension ratios shown on the pattern chart. These are the levels Autochartist™ uses to determine where the market may move following pattern completion.
20. **Forecast From/Forecast To** – Indicate the price points at the bottom and top of the forecast region.
